/note="Vector: pBluescript SK-; Site_1: EcoRI; Site_2:
XhoI; cDNA was prepared from polyA+ enriched RNA from
cotyledons and primary leaves harvested 5 and 8 days after
inoculation with Colletotrichum trifolii. The cDNA was
directionally ligated into the Uni-ZAP XR vector from
Stratagene and packaged using Gigapack III Gold packaging
extracts. Plasmids containing cDNA inserts were excised
from the recombinant lambda-ZAP phage using Ex-Assist
helper phage and propagated in XLOLR cells. Note: EST may
be of fungal origin."

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present sequence represents tomato anthocyanin 1 (ANT1). The ANT1 polynucleotide can be used for modifying the expression of a native plant gene, particularly for producing an anthocyanin 1 phenotype in plants, which is responsible for many red and blue colours in plants. The polynucleotide is useful for modifying e.g. leaf colour, flower
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    AAE01932 standard; Protein;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           characteristics of plants, e.g., corn, potato and cotton plants, when their expression level is altered. Specifically, they are used for modifying the nutritional content of plants or seeds, e.g., to modify vitamin and mineral content, to modify the oil content of seeds, to modify the insoluble sugar content of seeds, to modify phremyl lipid content, to modify fatty acid and modify wax content. They may also be used to alter seed characteristics such as shelf-life, size, stress tolerance, seedling vigour, pest and pathogen resistance and germination rate. They may also be used in gene therapy. Therefore manipulating transcription factor levels in plants offers great potential in agricultural biotechnology for modifying a plant's traits.

                                                                                                                                                                                                                 comprising a plurality was the sequence from a database comprising a plurality of known plant sequences comprising sequence information selected from one of 464 fully defined sequences given in the specification. The isolated or recombinant polynucleotide is used for producing a plant having a concision of the method comprising selecting a polynucleotide that encodes a polypeptide or an antisense nucleic acid, inserting the polynucleotide or antisense nucleic acid into an expression vector, introducing the vector into a plant or a cell of a plant to overexpress the polypeptide or antisense nucleic acid, thereby producing a modified production of agriculturally useful proteins or metabolic chemicals, pest tolerance, environmental stress response (e.g. drought), microbial disease resistance, herbicide resistance, seed and fruit yield, growth crate, leaf and flower senescence and many other traits listed in the specification). The present sequence is one of the 232 proteins which are
                                                                                                                                                        Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                              associated with a plant trait as compared to a wild plant. Also include are a transgenic plant comprising the polynucleotides, a computer areadable medium having stored sequence information, and identifying a readable medium having stored sequence information, and identifying a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              sequence identity, where the plant possesses an altered trait as compared to a wild-type or reference plant, or the plant exhibits an altered phenotype as compared to a wild-type or reference plant, or the plant exhibits ectopic expression or altered expression of one or more genes exhibits ectopic expression or altered expression of one or more genes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to 1 of 232 isolated or recombinant polynucleotides encoding an Arabidopsis thaliana transcription factor, their variants, complements, fragments, or related polynucleotide with 31% to 95%
                                                                                                                                                                                        Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           An isolated or recombinant polynucleotide used to produce a transgenic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Pilgrim

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       á
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  밁
                                                                                                                                                                                             Arabidopsis thaliana production of anthocyanin pigment (PAP) genes PAP1

or PAP2. The genes for both PAP1 and PAP2 have been mapped to chromosome

1. PAP1 and PAP2 are MYB-like transcription factors that regulate the

production of anthocyanin pigment. The nucleotide sequence of the

invention is useful for screening for PAP gene expression, it is also

cuseful for detecting promoter activity within a plant cell. The

culeotide sequence is also useful for screening for plant cell (e.g.,

A. thaliana) transformation. The transformed plant cells are then used

to produce transgenic plants with tissue-specific altered colour

expression. The nucleotide sequence is also useful for enhancing

accumulation of phenylpropanoid product in a plant. A transgenic

plant is useful for detecting a stress condition such as light

stress, water stress, pH stress, temperature stress, heavy metal

stress, pathogen attack or infection, wounding, nutrient deficiency,

herbivory, or abnormal hormone levels in a plant. PAP1 or PAP2

coversyression can also be useful for plant or PAP2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New isolated PAP1 or PAP2 gene, useful for increasing pigmentation in plants, as reporter genes for analysing expression pattern of promoter of interest, and to increase flux through phenylpropanoid pathway
                                                                                                                                     overexpression can also be useful in developing or enhancing d colouration in ornamental plants for commercial sales, and for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              This invention relates to the nucleotide and protein sequences of novel Arabidopsis thaliana production of anthocyanin pigment (PAP) genes PAPI
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Claim 9; Page 26-27; 29pp; English

                       The present sequence represents a plant stress tolerance-related myloblastosis (MYB) transcription factor. The specification describes AtMYB60, AtMYB764, AtMYB75 and AtMYB90. MYB polypeptides are useful for enhancing a plant's tolerance or sensitivity to stress e.g. salt, drought, cold and heat tolerance. It is also useful for producing a

Sequence

```
CC readable medium having stored sequence information, and identifying a composition of the medium having stored sequence information, and identifying a common sequence from a database comprising a plurality of known plant common sequence comprising a plurality of known plant common sequences comprising sequence information. The isolated or combinant polymucleotide is used for producing a plant having a commodified trait, the method comprising selecting a plant having a commodified trait, the method comprising selecting a polymucleotide that concodes a polymeptide or an antisense nucleic acid, inserting the color polymucleotide or antisense nucleic acid into an expression vector, controducing the vector into a plant or a cell of a plant to overexpress the polymeptide or antisense nucleic acid, thereby producing a modified collant, and selecting for a modified trait (e.g. increased collant, and selecting for a modified trait (e.g. increased collant, and selecting for a modified trait (e.g. drought), microbial collars or metabolic chemicals, pest tolerance, nerbicide resistance, seed and fruit yield, growth collars or metabolic chemicals, and selecting for a modified trait (e.g. drought), microbial collars or metabolic chemicals, pest tolerance, herbicide resistance, seed and fruit yield, growth collars or metabolic chemicals.
                                                                                                                                                                                                                                                                                                                                                                            complements, fragments, or related polynucleotide with 31% to 95% sequence identity, where the plant possesses an altered trait as compared to a wild-type or reference plant, or the plant exhibits an altered phenotype as compared to a wild-type or reference plant, or the plant exhibits ectopic expression or altered expression of one or more genes associated with a plant trait as compared to a wild plant.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   밁
            a Mentha sp. or Taxus sp. terpenoid pathway gene where the terpenoid pathway gene encodes limonene synthase (LS) or taxadiene synthase (TDS). It is also useful for identifying one or more transcription factors that activate one or more genes of a biological pathway of a plant, fungi or animal cell, where the biological pathway can be a biochemical pathway such as biosynthetic pathways for soluble and insoluble carbohydrates, for amino acids and a response pathway to abiotic stress such as cold, freezing, drought, heat, nutrient deficiency, pH or biotic stress such as flowering, root development, a response pathway to environmental cues such as light intensity and light quality, circadian rhythm. Sequences
                                                                                                                                                                                                                              a polynucleotide which encodes a transcription factor for controlling the expression of one or more genes in a pathway. The method is useful for determining whether a member of a pool of test transcription factor polynucleotides encodes a biosynthetic pathway transcription factor or a primary metabolite pathway gene or a secondary metabolite pathway gene such as a terpenoid or alkaloid pathway gene transcription factor. It is also useful for determining whether a member of a pool of test encodes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Transcription factor; metabolite pathway; terpenoid; limonene synthase; alkaloid pathway gene; taxadiene synthase; biological pathway; freezing; abiotic stress; cold; drought; heat; nutrient deficiency; biotic stress; infection; developmental pathway; flowering; root development; TDS; LS;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Determining whether one of several test transcription factor (TF) polynucleotides encodes pathway TF by determining expression from pathway gene promoter linked to reporter gene in a cell in present
                                                                                                                                                                                                                                                                                                                                                                                                           Disclosure; Page 153;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  production of anthocyanin pigment. The nucleotide sequence of the cinvention is useful for screening for PAP gene expression, it is also useful for detecting promoter activity within a plant cell. The nucleotide sequence is also useful for screening for plant cell (e.g., A. thaliana) transformation. The transformed plant cells are then used to produce transgenic plants with tissue-specific altered colour carpetsion. The nucleotide sequence is also useful for enhancing carpension. The nucleotide sequence is also useful for enhancing carpension of phenylpropanoid product in a plant. A transgenic plant is useful for detecting a stress condition such as light carpens, water stress, pH stress, temperature stress, heavy metal carpens, pathogen attack or infection, wounding, nutrient deficiency, therefore, pathogen also be useful in a plant. PAP1 or PAP2 colouration in ornamental plants for commercial sales, and for colouration plants to stress. Introduction of PAP1 or PAP2 sensitises or lants to research more mightly to a stress of the parameters that are
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Matches

CC associated with a plant trait as compared to a wild plant. Also included CC are a transgenic plant comprising the polynucleotides, a computer readable medium having stored sequence information, and identifying a homologue sequence from a database comprising a plurality of known plant cC homologue sequences given in the specification. The isolated or recombinant polynucleotide is used for producing a plant having a computer cC modified trait, the method comprising selecting a polynucleotide that cellocide is used for producing a plant having a composition of a polypup tide or an antisense nucleic acid, inserting the colynucleotide or antisense nucleic acid into an expression vector, introducing the vector into a plant or a cell of a plant to overexpress complete acid into an expression vector, and selecting for a modified trait (e.g. increased compant, and selecting for a modified trait (e.g. increased compant, and selecting for a modified trait (e.g. increased compant, and selecting for a modified trait (e.g. drought), microbial compant of a griculturally useful proteins or metabolic chemicals, possible tolerance, environmental stress response (e.g. drought), microbial companies of the companies of the companies of the companies of the prosent sequence is one of the 232 proteins which are constitution for trait in factors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    complements, fragments, or related polynucleotide with 31% to 95% sequence identity, where the plant possesses an altered trait as common to a wild-type or reference when the plant possesses are altered trait as common to a wild-type or reference when the plant possesses are altered trait as common to a wild-type or reference when the plant possesses are altered trait as common to a wild-type or reference when the plant possesses are altered trait as common to a wild-type or reference when the plant possesses are altered trait as common to a wild-type or reference when the plant possesses are altered trait as common to a wild-type or reference when the plant possesses are altered trait as common to a wild-type or reference when the plant possesses are altered traits.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Adam
                                                                                                                                                                                                                                                                                                                                                                                                                                                                       sequence identity, where the plant possesses an altered trait as compared to a wild-type or reference plant, or the plant exhibits an altered phenotype as compared to a wild-type or reference plant, or the plant exhibits ectopic expression or altered expression of one or more genes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to 1 of 232 isolated or recombinant polynucleotides encoding an Arabidopsis thaliana transcription factor, their variants,

     The present sequence is homologue G2421 of Arabidopsis thaliana transcription factor G663. The transcription factors may be used to modify traits associated with structural or developmental characteristics of plants, e.g., corn, potato and cotton plants, when their expression level is altered. Specifically, they are used for modifying the nutritional content of plants or seeds, e.g., to modify vitamin and mineral content, to modify the oil content of seeds, to modify the insoluble sugar content of seeds, to modify the insoluble sugar content of seeds, to modify the oil content of seeds and seeds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Transcription factor; trait modification; structural characteristic; developmental cagricultural biotechnology.
vitamin and mineral content, to modify vitamin to modify the insoluble sugar content of content, to modify fatty acid and modify fatty acid and modify fatty acid.
                                                                                                                                                                                                                             Nucleic acids encoding plant transcription factor polypeptides, useful for altering the developmental and structural characteristics of plants, e.g. corn, potato and cotton plants -

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            tolerance, seedling vigour, pest and pathogen resistance and germin rate. They may also be used in gene therapy. Therefore manipulating transcription factor levels in plants offers great potential in agricultural biotechnology for modifying a plant's traits.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          are a transgenic plant comprising the polynucleotides, a computer creadable medium having stored sequence information, and identifying a compound sequence from a database comprising a plurality of known plant sequences comprising inputting sequence information selected from one of 464 fully defined sequences given in the specification. The isolated or recombinant polynucleotide is used for producing a plant having a composition of the polynucleotide or an antisense nucleic acid, inserting the polynucleotide or an antisense nucleic acid, inserting the polynucleotide or antisense nucleic acid, thereby producing a modified plant, and selecting for a modified trait (e.g. increased plant, and selecting for a modified trait (e.g. increased plant, and selecting for a modified trait (e.g. drought), microbial composition of agriculturally useful proteins or metabolic chemicals, pest tolerance, environmental stress response (e.g. drought), microbial constitution flower sensescence and many other traits listed in the specification). The present sequence is one of the 232 proteins which are

It is also useful for producing a transgenic plant with enhanced stress tolerance or stress sensitivity. MYB polypeptides are also useful for increasing the production of products of the phenylpropanoid biosynthesis pathway, e.g. stilbenes, flavonoids, lignins, salicylic acid, anthocyanins, and phenolic
                                                                                                                                                                                                                                                                                                                                              The present sequence represents a plant stress tolerance-related myloblastosis (MYB) transcription factor. The specification describes atmYB60, AtmYB764, AtmYB75 and AtmYB90. MYB polypeptides are useful for

The sequence was deduced from GhWB 7. DNA isolated from a Gossypium hirsutum cv. Acala SJ-2 10-day pre-anthesis fibre cDNA library. A claimed method of modulating transcription in a plant involves introducing into the plant a recombinant expression cassette comprising a promoter that is operably linked to a heterologous polynucleotide encoding a MYB protein, especially dhWRB 1 or GhWYB 6. The plant is especially a cotton plant, and the promoter directs expression of the polynucleotide in cotton fibres or roots. Valuable phenotypes can be conferred on the plant by this method, e.g. increased fibre quality, yield, length, strength or fineness, alteration of root architecture, and enhanced growth.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Modulating transcription in plants for improving cotton fiber quality comprises introducing a recombinant expression cassette comprising a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present sequence is that of cotton R2R3-MYB transcription factor GhMYB 7. The sequence was deduced from GhMYB 7 cDNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Claim 23; Page 44; 50pp;

                                                                                                                                                                                     The present invention relates to novel plant transcription factors from Eucalyptus grandis or Pinus radiata. The present sequence is one such transcription factor. The transcription factor may be used to produce a plant having modified gene expression such as a woody plant e.g. a eucalyptus, pine, acacia, poplar, sweetgum, teak, or mahogany species or to modify the activity of a polypeptide in a plant. The transcription factors of the present invention are members from the following families of regulatory proteins bZIP bZIP family of G-box binding factors, basic helix-loop-helix zipper, homeotic/homeodomain/homeobox/MADS, homeodomain zipper, LIM domain, AP2 and EREBS, zinc finger domains of type 2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New isolated polynucleotide encoding a plant transcription factor for producing a plant e.g. a woody plant, preferably eucalyptus or pine, having modified gene expression or modified activity of a polypeptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               11-MAR-1999;
